

# WANT SOLAR?

## TESTVILLE UTILITIES CAN HELP. WE RECOMMEND THESE BEST PRACTICES.

**Reach out to us.** We can help you think through important questions like: Should my solar array be ground or roof mounted? Would my solar project receive any shading? What types of incentives am I eligible for?

**Contact local solar installation companies.** Utility staff can help you find local contractors and review proposals.

**Select your contractor.** We recommend getting at least three quotes to compare total costs and payback periods of different systems.

**Complete required interconnection documents.** The Distributed Generation Application and Solar Photovoltaic Supplemental Application Form can be found at [testvilleutilities.com](http://testvilleutilities.com).

**Obtain local permits.** All solar arrays require a building permit, and some may require Plan Commission approval. Commercial roof top systems require a structural analysis.

**Installation and inspection.** After installation of your solar equipment, a final inspection is required by our local building inspector and Testville Utilities.

**CHOOSE**  
renewable

Did you know that it only takes three blocks of renewable energy to power the average home for a month? Our Choose Renewable Program is only \$2 per block per month and increases the amount of electricity generated from clean energy sources, helping lower costs over the long term.
